

SFU Parking Mayhem

Mid-day SFU parking is a nightmare – crowded lots, random traffic cones there for unknown reasons, cars parked everywhere, and the dreaded Concord parking officers. Scraping together enough money for a parking pass is the only way to slightly ease the pain.

Setting the Stage

Players will control a car navigating a maze-like parking lot, surrounded by **concrete walls** and filled with **traffic cones** acting as barriers – both bearing no consequences. The pathways are filled with coins, parked cars, a roaming Concord parking officer on the lookout, and if you're lucky, lost student notes that could give you some bonus knowledge for that upcoming test! The journey begins at the entrance to the parking lot.

Objective

The objective is to collect all **10 coins** (+5 points each) to fill the progression bar and afford a parking pass. Once you reach this goal, you must navigate to the exit to reach the ticket booth, where you can purchase the pass and complete the game. The ultimate goal is to be able to park legally without taking any punishments. Be careful, if your score goes below zero you lose!

Enemies

Parked Cars: Scattered around the lot. If you hit one, your car will take damage and you will lose -8 points from your score.

Concord Parking Officer: The real threat. They are constantly on your trail, working tirelessly to ruin your day. If they catch up to you and see you don't have a parking pass, they will be heartless and demand that you leave campus, ending the game immediately.

Rewards

Coins: The lot is populated with 10 coins dropped by students, collecting them all will allow you to buy a parking pass and complete the game.

Lost Notes: If you're feeling adventurous, you can try and collect lost student notes. These notes appear randomly throughout the game and disappear quickly as their owners realize they're gone. If you manage to grab one before they vanish, you'll earn +10 points to your score, rewarding quick players for their swift response and risk-taking.

Plans:

- Meetings every Monday and Thursday in person, Friday online
- Meet and discuss individual roles, deadlines, and tasks (who works on the maze; characters - main character, enemies; timer; scoring/points; menu pages - start, win, game over) before starting a new phase of the software development cycle
- Online chat to talk about progress and any challenges
- Check-ins at every meeting to see how everyone is doing with their tasks and to see if everyone is on track to meet deadlines
- Handle challenges by bringing them up with the group and working on them together to find a solution

Phases:

1. Communicate with team in-person or online
2. Plan who does which tasks and create the schedule and deadlines
3. Modeling / designing - UML, mock-ups of UI
4. Construction - implementing and testing
5. Deployment - feedback / presentation
